

Pararapide Cleaner

Product Ref: (DsL22-0516)
Issue No: 01

DESCRIPTION

Pararapide Cleaner is a highly-effective fast-evaporating Ethyl-acetate solvent ideal for cleaning tools and for pre-treating (cleaning) metal and non-absorbent substrates before Pararapide surfacing or waterproofing products are applied.

USE

Pararapide Cleaner is used to clean/remove residue of products from tools. It is also used to clean metal and non-absorbent substrates before Pararapide waterproofing and surfacing systems are applied.

Pararapide Cleaner must never be used as a thinner for Pararapide products.

PACKAGING

Canister: 10 l or 30 l

APPLICATION

The product should only be used in the open air or in well ventilated interiors. Seal the container again so it is airtight immediately after using the **Pararapide Cleaner**.

a) For cleaning tools

Tools should be cleaned thoroughly with the cleaning agent and a brush directly after they have been used for Pararapide liquid products. Simply immersing the tools in the cleaning agent will not prevent the material from hardening.

b) For cleaning metal and non-absorbent substrates

Pour **Pararapide Cleaner** onto a lint-free cloth and rub down the surfaces. The cleaning agent must have dried completely before Pararapide products are applied.

STORAGE

Store the cleaning agent in its original packaging, sealed so it is airtight, and in a cool, dry place, and far from sources of heat and ignition. Direct sunlight on the containers should be avoided, including on site. After removing some of the contents, reseal the containers so they are airtight.

SAFETY

Please refer to the Health and Safety data sheets for the products used.
